

CLAIM AMENDMENTS:

1. (Currently Amended) A drapery lining comprising, in combination:
 - a metalized film having a first side and a second side;
 - a first layer of acrylic latex having a first side and a second side, said second side of said first layer of acrylic latex is coated to said first side of said metalized film;
 - a drapery fabric coupled to said first side of said first layer of acrylic latex;
 - and
 - a second layer of acrylic latex having a first side and a second side, said first side of said second layer of acrylic latex is coated to said second side of said metalized film, said combination of said metalized film, said first layer of acrylic latex, said drapery fabric and said second layer of acrylic latex comprising providing a blackout and thermal drapery lining; and
 - ~~a drapery fabric coupled to said first side of said first layer of acrylic latex.~~
2. (Cancelled)
3. (Currently Amended) The drapery lining of Claim 1 wherein said second side of said second layer of acrylic latex is flocked.
4. (Currently Amended) The drapery lining of Claim 1 wherein said first side of said first layer of acrylic latex is flame retardant.
5. (Currently Amended) The drapery lining of Claim 1 wherein said second side of said second layer of acrylic latex is flame retardant.
6. (Currently Amended) The drapery lining of Claim 1 wherein said film is metalized with aluminum.

AMENDMENT

- 2 -

7. (Currently Amended) The drapery lining of Claim 6 wherein said aluminum has an optical rating of between 1.5 and 4.0.

8. (Currently Amended) The drapery lining of Claim 1 wherein said film is metalized with a metal having a thickness of between .0002 to .03 millimeters.

9. (Currently Amended) The drapery lining of Claim 1 wherein said film is polypropylene.

Claims 10-18 (Cancelled)

19. (Previously Presented) The drapery of Claim 33 wherein said light impermeable metalized film is metalized with aluminum.

20. (Previously Presented) The drapery of Claim 19 wherein said aluminum has an optical rating of between 1.5 and 4.0.

21. (Previously Presented) The drapery of Claim 33 wherein said light impermeable metalized film is metalized with a metal having a thickness of between .0002 to .03 millimeters.

22. (Previously Presented) The drapery of Claim 33 wherein said film is polypropylene.

23. (Currently Amended) A method for manufacturing a drapery lining, comprising, in combination, the steps of:

providing a film having a first side and a second side;

metalizing said first side of said film and said second side of said film;

coating a first layer of acrylic latex to said first side of said metalized film;

providing a fabric;

coupling said fabric to said first layer of acrylic latex;

and

coating a second layer of acrylic latex to said second side of said metalized film, said combination of said metalized film, said first layer of acrylic latex, said fabric and said second layer of acrylic latex comprising providing a blackout and thermal drapery lining.

24. (Cancelled)

25. (Original) The method of Claim 23 further comprising the step of flocking said second layer of acrylic latex.

Claims 26 -28 (Cancelled)

AMENDMENT

- 4 -

29. (Currently Amended) A method for manufacturing a drapery, comprising, in combination, the steps of:

providing a film having a first side and a second side;

metalizing said first side of said film and said second side of said film for providing a light impermeable metalized film;

providing a first layer of fabric having a first side and a second side;

coupling said second side of said first layer of fabric to said first side of said light impermeable metalized film;

providing a second layer of fabric having a first side and a second side; and

coupling said first side of said second layer of fabric to said second side of said light impermeable metalized film, said combination of said light impermeable metalized film, said first layer of fabric and said second layer of fabric comprising providing a blackout and thermal drapery capable of providing a blackout effect while at the same time creating a thermal barrier effect, and said blackout and thermal drapery preventing a substantial amount of light penetration into a room from outside sources.

Claims 30-31 (Cancelled)

32. (Previously Presented) The method for manufacturing a drapery according to Claim 29 further comprising the steps of:

providing said light impermeable metalized film comprises polypropylene;

metalizing said light impermeable metalized film with a metal having a thickness of between .0002 to .03 millimeters; and

metalizing said light impermeable metalized film with aluminum having an optical rating of between 1.5 and 4.0.

33. (Previously Presented) The drapery according to the method of Claim 29.
